

trio The **web-learning system**
by Regione Toscana

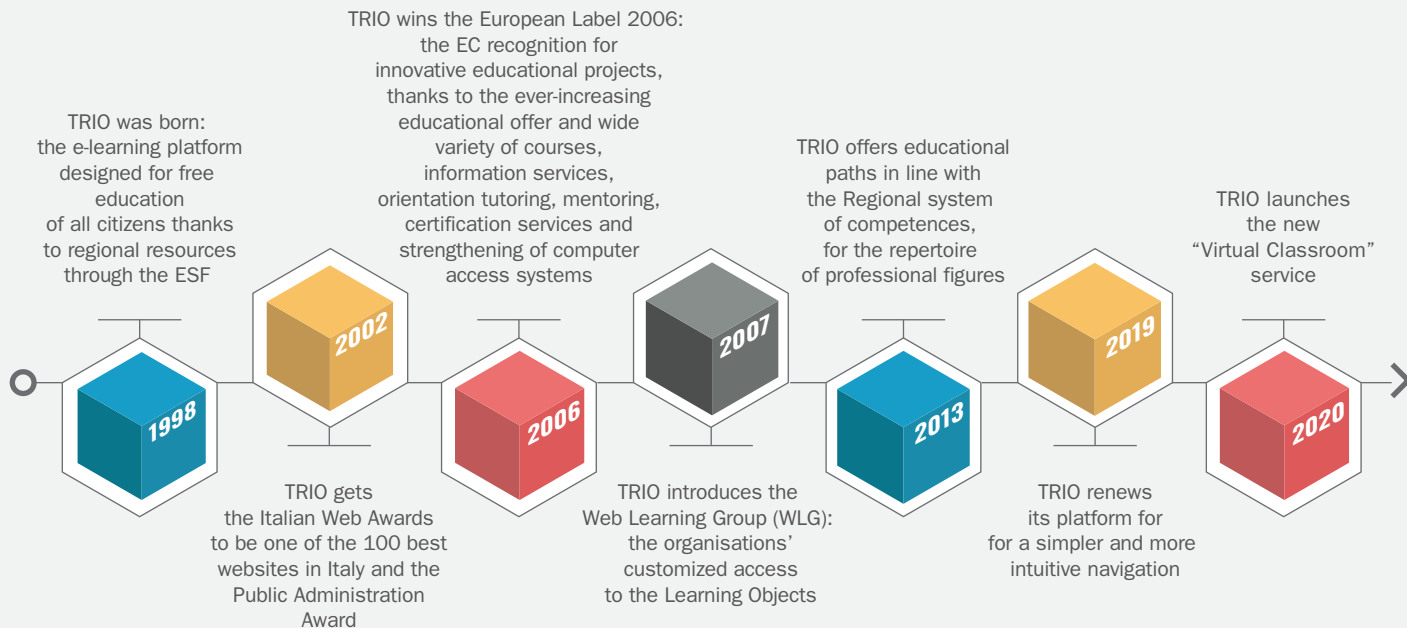

Education
starts with you

TRIO, the free web-learning platform

TRIO is the completely free web-learning system by Regione Toscana for learning and professional training, a platform of courses and easily accessible learning objects for citizens, institutions and public organisations, educational organisations and private companies.

Best practice in Europe

TRIO stands for **Technology, Research, Innovation and Orientation**, and is one of the first **distance learning projects in Europe** funded by regional resources through the European Social Fund (ESF). Over the years, TRIO has become such an important resource for the territory that, even today, this project places Tuscany in the forefront in the field of e-learning, both in Italy and in Europe.

I numeri di TRIO*

*since 2002

650.000 | SUBSCRIPTIONS

2.000 | LEARNING OBJECTS

100.000 | ACTIVE USERS

1.800.000 | ONLINE COURSES

TRIO is part of the many initiatives by Regione Toscana to promote:

Employment and employability

female employment and continuing education, with particular reference to young people

Social inclusion

for the job placement of disadvantaged people and support for social inclusion

Qualification and improvement of the systems of vocational education and training

through orientation support and the proposal of an educational offer related to the specific needs of the territory

TRIO for everyone

TRIO is a web-learning integrated system of products and services which provides an effective response to the educational needs of:

Students of all levels of education, to enrich and strengthen their training path

Employed, to achieve the requalification and adaptation of their competences

Unemployed, to get new skills required by the job market

Citizens, to profit from the lifelong learning opportunity

Foreign citizens, to facilitate their social, cultural and professional integration

TRIO for public and private organisations

TRIO offers customized access to all institutions and public organisations, educational institutions and private companies based in Tuscany, through the activation of the **Web Learning Group (WLG)**.

It's an online learning environment structured by training objectives and addressed to various user groups that are members of the same organisation or aggregated by specific WLG managers. The use of both WLG and services offered by TRIO is completely free of charge.

The WLG Service Card defines its general purpose, its specific offer, the activation procedures and finally the rights and duties of those who manage it.

Learning with TRIO

TRIO has a very wide educational offer, with a catalogue of hundreds of **courses available online** at any time of the day. The catalogue is divided into **12 macro areas** by argument, where you can filter by skills according to the latest EU regulations. Each course is made up of different teaching modules, accompanied by audio, video, images and animations that enhance the experience and quality of learning. After passing the final test, TRIO releases a certificate of attendance.

Professions and trades

- Food - Catering
- Building
- Electronics - Electricity
- Cosmetology and personal care
- Transversal themes
- Jewellers - Goldsmiths
- I.T. fundamentals
- Stock - Sales
- Furniture and real estate
- Mechanic - Coachbuilder
- Administration - Accounting
- Textile - Leather goods

Business and management

- Administration, finance and audit
- Food safety (HACCP)
- Logistics - Production
- Marketing and communication
- Environmental policy
- Quality standards
- Problem solving and teamwork
- Project management
- Human resources
- Management strategies

IT

Accessibility - Usability
Browser
Copyright - Privacy - Data protection

Industry 4.0

Occupational safety

Auditing
General training
Specific training
Security systems

Tourism

Wellness
Regulations and planning
Activities and promotion
Museum studies
Mobility and exchanges

TRIO for schools

Customised catalogue

Teachers can download a customised catalogue to consult the list of courses they are interested in, as well as a selection of courses supporting compulsory training (for example GDPR, privacy and data processing, security, etc.).

They can also find an overview of some of the **best resources from TRIO** that can be proposed to students to supplement their online training.

EXTRA Environment

Each school may have its own dedicated and confidential environment upon request. Thanks to the **Web Learning Groups (WLG)**, each school has specific functionalities that allow teachers to replicate a real teaching activity. For example, it would be possible to create lessons to allow the teacher to distribute content in an interesting, flexible and above all simple way, using chats to facilitate real-time textual discussions.

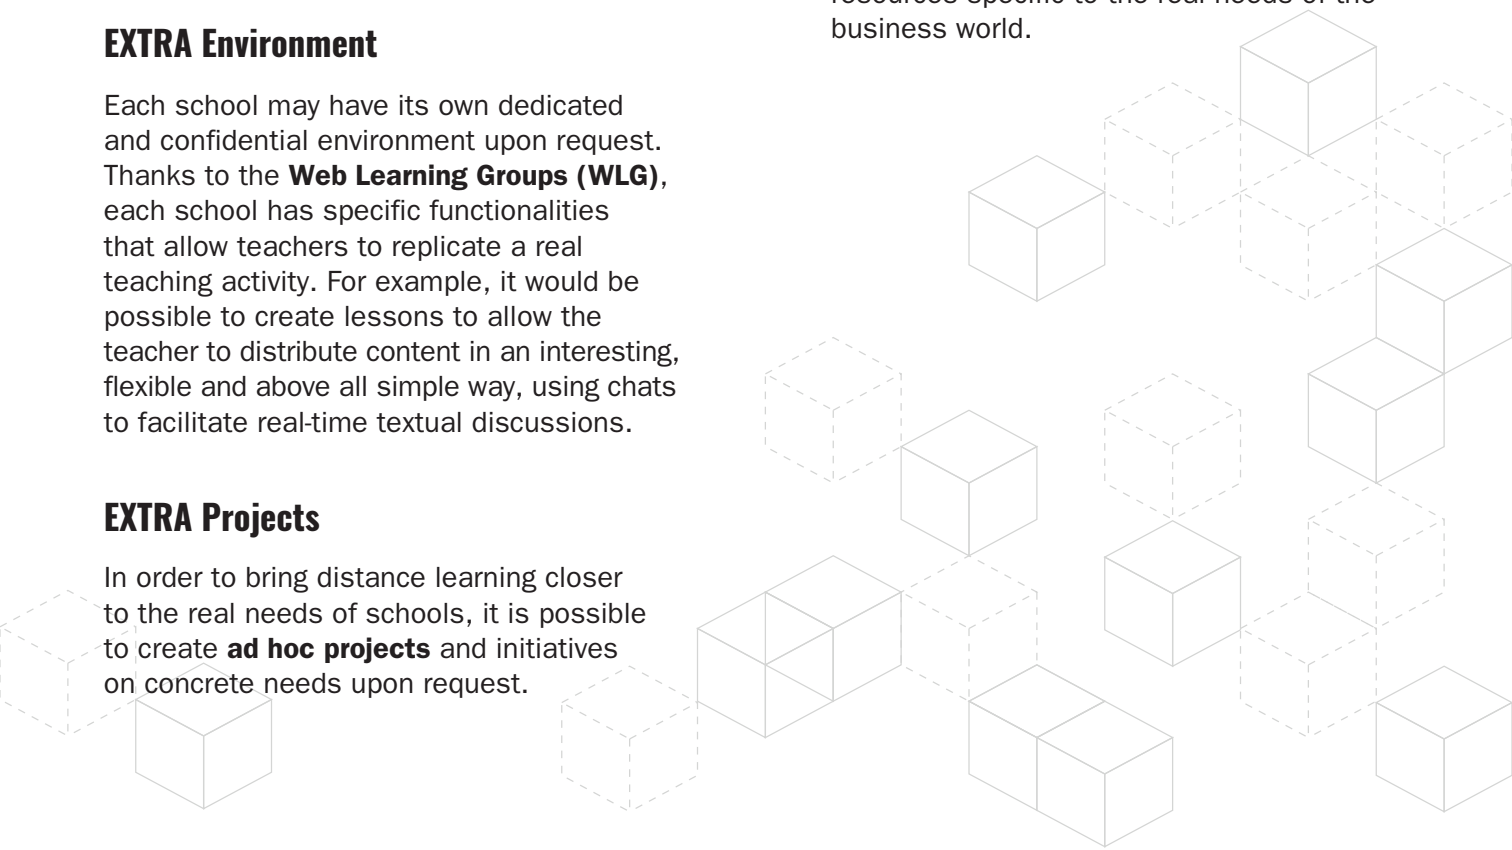

EXTRA Projects

In order to bring distance learning closer to the real needs of schools, it is possible to create **ad hoc projects** and initiatives on concrete needs upon request.

TRIO for businesses

The collaboration with the Chambers of Commerce of the territory and in particular with the PID (Punto Impresa Digitale) promotes dialogue in favor of distance learning for companies.

TRIO is one of the partners providing training content, on the Promofirenze website, created to support the entire regional production network. For the occasion, a dedicated catalog has been created, and organized into sectors of intervention, which shows the platform's resources specific to the real needs of the business world.

TRIO on the territory

Regione Toscana supports the project TRIO and offers free hubs where it is possible to access to the web-learning system, like employment centres, libraries and adult learning centres.

For any further information, please see the list of the so-called Poli TRIO available on the website www.progettotrio.it

A brand new portal

The portal of TRIO has been developed using an **open-source** software, called **Moodle**.

It is a learning management system technological platform. In 2019 the user experience has been completely redesigned, by offering simpler and more efficient navigation paths, and direct links to the main sections of the site to facilitate the search for educational resources.

www.progettotrio.it

A lot of services complementary to the didactics

Recorded virtual lessons, audio-podcasts and e-books are some of the educational resources available.

Users are given the opportunity to participate actively through webinars, educational workshops and the so-called **MOOC** (Massive Open Online Courses) designed to involve a large number of users.

The creation of Wiki pages and the constant access to thematic discussion forums are further opportunities for users to get involved in.

Contacts

The staff of TRIO is available to provide online assistance and solve any technical problems concerning the use of educational content.

It also offers a service of tutoring to help better understand the learning offer.
